Neuheit

Rataplan-Wecker

Hohltriebe

Die Rataplan-Wecker

besitzen durch ihre neuartige, mehrfach patentamtlich geschützte Bauart drei wesentliche Vorzüge:

- Einwandfreie Funktion.
- Leichte und übersichtliche Handhabung.
- Zeitersparnis bei Reparaturen.

Besondere konstruktive Verbesserungen:

1. **Triebzapfen und Triebstecken** aus federhartem Stahl hochglanzpoliert. Die dadurch verminderte Reibung, die guten Eingriffe infolge der eigenartigen Zahnform der Räder (D.R.G.M.) und die hochwertige Hemmung gestatten die Verwendung von um die Hälfte schwächeren Zugfedern als bei den bekannten Amerikaner-Weckern.
2. **Werkträger** (D.R.G.M.), auf dem das mit einer Metallunterlage versehene Zifferblatt ohne Splinte oder Stifte, stets zentrisch passend festsitzend aufgesprengt ist.
3. **Anordnung der Zugfedern** außerhalb des Werkes auf der Hinterplatte (D.R.G.M.). Bei Federbruch leicht auswechselbare Zugfedern ohne Herausnahme des Werkes aus dem Gehäuse.
4. **Leicht zerlegbare Walzenräder und Gesperre** (D.R.G.M.). Durch eine Vierteldrehung der Vorsteckfeder am Walzenrad ist sie abzuheben, und man kann alsdann die einzelnen Teile des Walzenrades von der Welle entfernen. Die Sperrfeder ist lose eingelegt und wirkt zweiseitig mit absoluter Sicherheit.
5. **Die Hemmung** (D.R.G.M.) besitzt infolge der besonderen Form der Steigradzähne keinen toten Punkt. Sie läßt sich nicht anhalten und geht nach vollständigem Ablauf bei den ersten Aufzugdrehungen des Schlüssels von selbst an.
6. **Weckerzeigerstellung** aus der Mitte, daher genaue Einstellung des Weckwerkes.
7. **Zeigerrichtknöpfe** (D.R.G.M.) mit der Fingerhaltung angepaßter konischer Form, so daß ein Abheben und Lockerwerden wie bei den bisherigen Richtknöpfen ausgeschlossen ist.

Rataplan Alarms

The Movement fitted to these Alarms is constructed in a new and ingenious way, and has three important advantages:

The faultless working of all parts.

The simple handling and all the parts can be easily reached.

The saving of time, should repairs be necessary.

The new easy practical features are:

1. The specially polished pinions and points are made of hardened spring steel. The friction is thereby reduced to a minimum, further the Patented shape of the teeth and the high class escapement allow the use of Mainsprings which are only half the strength of the usual pattern used in the ordinary alarm clocks on the Market.
2. The Dial is mounted on a plate and is securely held in position on the Patented movement bracket without pins or splints.
3. The Mainsprings are fitted outside the movement on the back plate and this system is Patented. In case of the springs breaking they can be renewed without taking the movement out of the case.
4. The Mainspring wheels, and arbors as well as the clicksprings and ratchets, which are Patented, can be taken to pieces by giving the friction spring on the arbor a quarter turn. The clickspring is fitted loose and works on double teeth, thus securing absolute safety.
5. The escapement which is Patented, ensures owing to the special shape of the teeth, that there are no dead points and it will not set, it is therefore obvious that immediately you wind the clock it is set going.
6. Alarm hand setting from the centre, which secures exact working of the alarm movement.
7. Both set-hand buttons are Patented and have a new form easy to grip which prevent them slipping and getting loose as with any ordinary set-hand button.

Réveils Rataplan

donnent par leur construction nouvelle trois avantages considérables:

Fonctionnement irréprochable.

Maniement facile et bien accessible.

Économie de temps pour les réparations.

Grandes améliorations de construction:

1. Les pivots des pignons lanternes et les fuseaux sont faits en acier trempé et poli. Par suite la friction réduite, l'engrenage parfait par la forme spéciale des dents de roue (breveté) et l'échappement à haute teneur, permettant l'emploi de ressorts moitié moins épais que ceux des réveils américains connus.
2. Support breveté du mouvement, cadran sur tôle encastré sur le support sans goupilles ni clavettes.
3. Les ressorts sont montés en dehors du mouvement sur la platine de derrière (breveté) et facilement démontables sans enlever le mouvement de la boîte.
4. Les grandes roues et leurs encliquetages sont facilement démontables. Par un quart de tour du petit ressort à la grande roue on peut enlever le petit ressort et démonter la grande roue. Le ressort d'encliquetage est placé séparément et fonctionne des deux côtés avec une sûreté absolue.
5. L'échappement breveté n'a pas de point mort à cause de la forme spéciale des dents de la roue d'échappement et ne peut pas s'arrêter. Il part seul dès les premiers tours de remontage.
6. Mise à l'heure du réveil au centre, par suite d'ajustement correct de l'heure du réveil.
7. Boutons d'aiguilles brevetés en forme conique suivant la tenue des doigts pour éviter que cela échappe et la perte des boutons comme aux réveils américains.

Los despertadores Rataplan

poseen por su nueva construcción, varias veces patentada, tres ventajas importantes:

Funcionamiento irreprochable.

Facil manejo y

Economía de tiempo en las reparaciones

Mejoras especiales en la construcción:

1. Los pivotes y las alas de los piñones son de acero templado y bien pulido. — El roce mínimo, los buenos engranajes por la forma especial de los dientes (D.R.G.M.) y el inmejorable escape, permiten el empleo de muelles que tienen la mitad de fuerza que los empleados en los despertadores llamados americanos.
2. La esfera de chapa se ajusta sin pasadores y siempre céntricamente sobre el porta-esfera (D.R.G.M.).
3. Los muelles están montados fuera de las patinas y en caso de rotura se pueden cambiar, incluso sin sacar la máquina de la caja.
4. Las ruedas imperiales son desmontables (D.R.G.M.). Dando un cuarto de vuelta al muelle-presión se separa la rueda del eje. El muelle trinquete va suelto, y funciona hacia ambos lados con completa seguridad.
5. El escape (D.R.G.M.), por la forma especial de los dientes de la rueda, no tiene el llamado „punto muerto“. No se para el volante y después de haber gastado toda la cuerda, rompe la marcha a las primeras vueltas del muelle.
6. La aguja del despertador parte del centro de la esfera lo que permite poner la hora de despertar con más exactitud.
7. La forma cónica especial de los botones impide que éstos se salgan, como ocurre generalmente con los botones corrientes.

Jahresuhren

Vorzüge der „G. B.“-Jahresuhren (Patent)

1. Die Pendelfeder ist während des Transportes durch eine verstellbare Schutzbrücke gesichert.
2. Die Pendelfeder ist mittelst einer Öse frei aufgehängt, kann daher leicht ohne Werkzeug aus- und eingehängt werden.
3. Die freie Aufhängung der Pendelfeder bewirkt eine bessere Regulierung der Uhr.
4. Der Ankerabfall kann mittelst eines Stellzeigers eingestellt und durch Stellschraube gesichert werden.

400 Day Clocks

The Advantages of the "G. B." 400 Day Clocks

1. All these Clocks are fitted with a safety Bridge which protects the Suspension Spring during transit.
2. The Suspension Spring hangs in a much freer position than before, as it is inserted quite loosely between a screw and a small pillar and can thus, if necessary be more easily taken out than the ordinary suspension spring.
3. As it hangs quite free, it will easily adapt itself to the position of the Clock and thus will contribute largely to a yet, more perfect time-keeping of these Clocks.
4. The setting in Beat Adjustment on the Top. The drop of the pallet can easily be regulated or timed with the Brass indicator underneath the Brass screw on top.

Pendules 400 Jours

Les Avantages du Mouvement 400 jours "G. B."

1. Nos mouvements 400 jours sont tous munis d'un pont de sûreté qui protège la suspension du balancier, trop souvent endommagée pendant le transport.
2. La lame de suspension se trouve librement accrochée à l'aide d'une porte à une vis d'acier; on peut l'enlever par un simple tour de main.
3. Le fait que la lame de suspension se trouve libre de tous côtés, ce qui n'a pas été fait à ce jour, augmente et facilite de beaucoup un réglage parfait de la pendule 400 jours.
4. La chute de l'ancre est facile à régler, moyennant une aiguille placée horizontalement. Une fois la rotation régulière obtenue, l'aiguille sera fixée à l'aide d'une vis bleue et la chute se trouvera garantie pour toujours.

Relojes de 400 Dias

Las Ventajas de los Relojes-"G. B." de 400 Dias

1. Para el transporte del reloj se han previsto todas las máquinas de un puente de protección, el cual preserva el resorte muy sensible de la péndola de cualquier daño durante el transporte.
2. El resorte de la péndola está suspendido libremente de un tornillo de acero por medio de un cordón; se puede sacar sin dificultad ninguna está péndola.
3. Está suspensión nueva, desconocida hasta hoy, contribuye esencialmente al mejoramiento de la regulación de los relojes de un año de marcha.
4. El escape de ánora se regula cómodamente sirviéndose de la aguja indicadore horizontal. Si el giro de la péndola es igual en ambos sentidos, entonces se fija la aguja indicadora atornillando fuertemente el tornillo azul con lo cual queda asegurado el escape del ancla.

Westminster-Melodie — Westminster Chime
Carillon Westminster — Carillón Westminster

Die Melodie ist eine getreue Nachbildung des Glockenspiels der Westminsterabtei in London

The Chime is a correct Reproduction of the well known full Westminster Chime

La mélodie est une copie exacte du Carillon de l'Abbaye Westminster à Londres

La melodía imita el toque conocido de las campanas de la Abadía de Westminster en Londres

□ 15 × 15 cm = 6 × 6 in.

Vorzüge des G. B. Hausuhrwerkes H. F.

1. Massives, sorgfältig ausgeführtes Werk mit Platinengröße 150 × 150 mm mit ff. gehärteten und polierten Stahlvolltrieben und polierten Zapfen.
2. Rechenkonstruktion mit geräuschlosem Transport.
3. Hammereinstellung durch Feinregulierschrauben.
4. Hammerwellen unter Brücke gelagert, daher frei herausnehmbar.
5. Für jede Gehäusetiefe verschieb- und einstellbare Hämmer mit Nutführung und Feststellschraube.
6. Abfallregulierung.
7. Transportpendel bei eingebautem Werk leicht ein- und aushängbar, da die Traghaken unterhalb des Werkbrettes liegen.

Advantages of the G. B. Grandfather Movement H. F.

1. Solid, superior finished movement. Plates measure 6 × 6 inch. Hardened and polished solid steel pinions and polished pivots.
2. Rack strike with noiseless motion.
3. The Hammers can be accurately adjusted by means of regulating screws.
4. The Hammer Arbors run through bridges and can therefore be easily removed.
5. By means of screws the Hammers can be moved inwards and outwards to suit any depth of case.
6. Setting in beat adjustment.
7. The pendulums can very easily be hooked to the pendulum holder, as this is especially lengthened to be below the movement bracket.

Avantages des mouvements d'Horloges H. F.

1. Mouvement massif très soigné avec platines de 150 × 150 mm avec les pignons et pivots en acier trempé et poli.
2. Le déclanchement du râteau silencieux.
3. Les marteaux sont fixés par des vis de réglage.
4. Les axes des marteaux placés sous un pont sont libres et facilement démontables.
5. Pour chaque profondeur de cage les marteaux peuvent être avancés ou reculés par une vis de fixation.
6. Marche très régulière.
7. La tige de suspension est très facile à accrocher et décrocher quand le mouvement est monté, parce que les deux crochets sont placés au-dessous de la planchette.

Ventajas de la Máquina G. B. para Reloj de Antesala H. F.

1. Máquina maciza de construcción esmerada, platinas de 150 × 150 mm piñones tallados y pulidos, pivotes pulidos.
2. Sistema de sierra silencioso.
3. Graduación de los martillos por tornillos.
4. Los ejes de mazo están montados entre puentes; por lo tanto se pueden sacar con facilidad.
5. Los mazos pueden acoplarse a cualquier fondo de caja.
6. Nivelación automática.
7. La péndola se engancha con suma facilidad, porque la tija de suspensión rebasa la parte baja de la platina.

Longitud de la péndola desde el centro de la esfera hasta la punta de la péndola 70, 90, 107, 113 cm,
Descenso de las pesas desde el centro de la esfera hasta la punta de las pesas 160 cm

Das kombinierte Whittington- und Westminster-Viertelschlagwerk mit Kettenzug.

Bei den bisher gebräuchlichen Viertelschlaguhren mit verschiedenen Schlagweisen wird die Whittington-Melodie auf Glocken- oder Röhrengongs und die Westminster-Melodie auf Rund-, Stab- oder Röhrengongs sowie Glocken gespielt. Das neue Werk besitzt acht Tonstäbe für die $\frac{1}{4}$ Schläge und vier für den $\frac{1}{2}$ Schlag und benutzt für beide Melodien dieselben Stiftenscheiben zum Heben der Hämmer, dieselben Hämmer und dieselben Tonstäbe. Mittels des oben am Zifferblatt angebrachten Hebels kann man beliebig die Whittington- oder die Westminster-Melodie einschalten.

Das Viertelspiel ist reiner und voller als bei Verwendung von Glocken, Rund- oder Röhrengongs. Der Stundenschlag ist besonders voll und feierlich, er erfolgt auf vier Stabgongs im Quartakkord.

Die Rechenkonstruktion in Verbindung mit der selbsttätigen Regelung des Viertelschlages bietet die Gewähr, daß das Schlagwerk immer die Stunde schlägt, bzw. Viertelstunde, welche die Zeiger anzeigen. Ein Falschschlagen ist ausgeschlossen.

Die Zeiger können vor- oder rückwärts gestellt werden, sollen aber bei solchen Werken nur langsam gedreht werden, damit der Rechen nach erfolgter Auslösung zum Abfallen Zeit hat.

Dieses Werk wird gegen einen entspr. Preisnachlaß auch mit der Westminster-Melodie allein geliefert.

The Combined Whittington and Westminster full four Quarter Chime, Weight Chain Movement.

The various Chiming Clocks which are on the market at present play the Whittington Chime on bells or tube gongs and the Westminster Chime either on standard, rod or tube gongs, also on bells.

This new movement has 8 rods for the quarter and 4 rods for the full hour strike and the same rods, the same hammer lifting pieces and the same hammers serve in this new movement for both chimes, which simplifies the working of the movement considerably.

These chimes can be alternated by switching a lever on top of dial.

The quarter chime in this movement is purer and fuller than when bells or standard gongs or tubes are used.

The hour strike is very sonorous on four rods in perfect harmony.

The construction of the rack and the self regulating arrangement of the quarters are a guarantee that the movement will always strike the correct hour on chiming the quarter shown by the hands.

Irregular striking is really made impossible.

The hands can be turned forwards and backwards, but as it is usual in such movements, they should be moved very slowly only over the quarters, so that the rack has time to drop.

The same movement can be had also with Westminster Chime only.

Mouvement Quatre Quarts à Chaînes. Carillons Westminster et Whittington combinés.

Les mouvements quatre quarts à différente sonnerie actuellement sur le marché jouent la mélodie du carillon Whittington soit sur gong rond, gong tige, cloches ou tubes.

Notre nouveau mouvement est construit avec 8 gongs tiges pour les quarts et 4 pour les heures, il utilise pour les deux mélodies le même tambour actionnant les marteaux, les mêmes marteaux et les mêmes tiges. Un levier au dessus du cadran permet de déclancher soit l'une soit l'autre des deux mélodies.

La sonnerie des quarts est plus pure et plus sonore que celle sur cloche, gong rond ou tube. L'heure en quart (4 tiges accordées) est particulièrement sonore et solennelle.

La construction à râteau, ainsi que le réglage automatique des quarts rend notre mouvement absolument indérégable, ni les heures ni les quarts ne peuvent décompter.

Les aiguilles peuvent être tournées en avant ou en arrière, on ne devrait cependant jamais négliger de les actionner très lentement, pour permettre la chute du râteau.

Le même mouvement peut être livré avec une certaine réduction de prix avec Carillon Westminster seulement.

El reloj de campana para cuartos de horas con tracción de cadenas, Whittington y Westminster combinados.

En los relojes de campana para cuartos de hora y distintos toques, usados hasta ahora, la melodía Whittington se toca en campanas ó en gongs de tubos y la melodía Westminster en gongs redondos, de barras ó de tubos ó en campanas. El nuevo mecanismo posee 8 barras acústicas para los $\frac{1}{4}$ de hora y 4 para los $\frac{1}{2}$ de hora, y utiliza para ambas melodías las mismas placas á clavijas para alzar los martillos, los mismos martillos y las mismas barras acústicas. Por medio de la palanca, practicada por encima de la esfera se puede conectar á voluntad la melodía Whittington ó Westminster.

El sonido en los cuartos de horas es más puro y sonoro que aplicando campanas, gongs redondos ó tubos. Especialmente el sonido de las horas es sonoro y solemne, se hace por 4 gongs de barras en acorde de cuarta.

La construcción de la sierra en unión á la sistematización automática del toque de $\frac{1}{4}$ de hora presenta la garantía de que siempre sonará la misma hora ó el mismo cuarto de hora, señalado por el minutero. Así se acaba con el inconveniente de irregularidades respecto de esto.

Las manecillas pueden moverse hacia delante y atrás, pero en tales mecanismos deben moverse tan solo lentamente, para dar á la sierra el tiempo de caer después de haber efectuado el desembraque.

Mediante una reducción correspondiente tal Máquina se entrega asimismo con la melodía Westminster sola.
