AUTOMOBILE CLOCKS

Jolting or vibration will not affect the Time-keeping of these Clocks

Clock

Shell

AUTOMOBILE NO. 2 FLUSH

8 Day Time

Finished in Nickel

Porcelain Dial, 2½ inches. Arabic or Roman Numerals. Beveled White Glass. Width of Clock 3½ inches. The Shell is sunk into the Cowl-board flush, and fastened with three screws. The Clock is inserted into the Shell with the numerals 6 and 12 being horizontal, the 12 to the right. A short turn to the left locks the clock in place, the numerals then being perpendicular. It projects only ⅓ inch from the board.

The Fastening, Regulating, Setting and Winding are invisible.

SIMPLEX

Illustration Actual Size
Dial, either Arabic or Roman Numerals
8-Day Time and 8-Day Automatic Alarm
Seamless Brass Case. Heavily Nickel Plated

Runs and Alarms for 8 days on one winding. You wind it but once a week. The alarm rings at the time set, stops and automatically resets to ring at the same time the next day without further attention. By adjustment of the pointer found on upper rim of the bell on the back of the clock, the length of time the alarm rings may be regulated. At "Short Alarm" the ring is about 7 seconds, each mark adds 7 seconds more to the ringing, at the last mark "Long Alarm" the ring is about 49 seconds. The alarm can be instantly stopped by pushing the button on top of the clock, which in no way interferes with the automatic operation of the alarm. Also has a switch on the back to shut off the alarm when time only is wanted.
